

CERBA HEALTHCARE KEY FIGURES

THE CERBA INSTITUTE

FOR A FAIR AND RESPONSIBLE CLINICAL PATHOLOGY

In 2015, we created the Cerba Institute, an endowment fund designed to promote and develop solidarity and citizen health actions in France and worldwide. Alongside associations and its public and institutional partners, the Cerba Institute works to support patients, healthcare professionals and research teams.

The Cerba Institute supports projects and initiatives contributing to :

Training and information
related to health,
sports and risk
behaviors...

Prevention,
universal,
selective and
targeted.

Research
in clinical
pathology

Solidarity
towards improved hygienic
living conditions and better
access to drinking
water and care.

ADVANCING DIAGNOSIS MEANS ADVANCING HEALTH

THE GROUP

Cerba HealthCare, a leading player in medical diagnosis, aims to support the evolution of health systems towards more prevention. It draws on more than 50 years of expertise in clinical pathology to better assess the risk of diseases development, detect and diagnose diseases earlier, and optimize the effectiveness of personalized medicine.

Every day, on 5 continents, the Group's 15 000 employees sustain the transformation of medicine, driven by one deep conviction : to advance diagnosis is to advance health.

CERBA HEALTHCARE, enlightening health.

4 CORE VALUES COMMON TO ALL OUR ACTIVITIES

EXCELLENCE

We act with the utmost rigor to improve the quality of our services, the men and women of the Company to obtain the best of each one in the service of all.

BOLDNESS

We promote entrepreneurial spirit and the taking of initiatives to dare and explore new ways to advance diagnosis.

RESPECT

We consider each individual with kindness, and cultivate respect in our relationships with our teams, partners, healthcare professionals and patients for whom we work every day.

COMMITMENT

We are committed to patients, healthcare professionals, our business and institutional partners to deliver accurate and useful results for improving everyone's health.

OUR DIAGNOSIS EXPERTISE

CLINICAL PATHOLOGY AT THE HEART OF DIAGNOSIS

We draw on more than 50 years of expertise in clinical pathology and master the entire diagnostics value chain

Routine clinical pathology

Close to patients and within health centres, our network combines expertise and proximity with up to 1 000 clinical pathologists in our 1,160 laboratories in France, Luxembourg, Belgium, Italy and Africa, treating more than 45 millions patients every year.

Thanks to their geographical proximity and daily work with clinicians, our teams participate in the screening and initial diagnosis of "city" patients, in particular by carrying out routine biological tests, which are essential for the early detection of diseases. Although it is the fundamental mission of the local laboratory, this first-line work requires thoroughness, responsiveness, versatility, but also contribute to patients primary care.

Specialised clinical pathology

Cerba, at the origin of the creation of the Cerba HealthCare Group, is a world-class leader in specialised clinical pathology.

The laboratory performs complex analyses -on samples coming from 50 countries around the globe- on behalf of other clinical pathology laboratories that cannot perform their own analyses because of the level of expertise, equipment or certification required. Cerba offers an unrivalled panel of over 2,500 tests covering 40 medical specialties and performs 140 000 analyses each day for public and private health institutions around the world, ensuring an essential link in the healthcare service offering.

« We are convinced that clinical pathology is the key to not only offering more personalised and effective treatments, but also to moving towards a more preventive healthsystem. There is therefore a need to put diagnosis back into the heart of the care pathway and public health policies. »

— CATHERINE COURBOILLET
Président of Cerba HealthCare

Clinical pathology for clinical trials

Before any new drug can be authorised, it must undergo a rigorous process of clinical studies. In order to carry out a clinical trial, pharmaceutical companies need partners capable of handling patient recruitment, analyses, sample transport, results management and storage of biological samples (biobanking). Cerba Research provides this expertise that is key to pharmaceutical industry, biotechnology companies, CROs, specialists of IVD (in vitro diagnostics) and research institutions all together. Its offering covers early phase trials, clinical development as well as development and validation of testing and biomarkers.

Clinical pathology for clinical trials has become an indispensable tool for the implementation and acceleration of new therapies and also contributes to the production of fundamental knowledge in medicine and human biology.

Veterinary clinical pathology

Cerba Vet supports veterinarians with a comprehensive in vitro diagnostic offer comprising 3 complementary expertises : clinical pathology, anatomocytology and veterinary genetics. Cerba Vet also relies on dedicated technical platforms to ensure the security and traceability of samples and the control of time-to-results, as well as accredited logistics for territorial coverage throughout France.

Anatomo-cytopathology

At the crossroads of clinical, surgical, imaging, medical pathology and research, anatomo-cytopathology plays a key role in the diagnosis, prognosis and treatment of diseases, in particular cancers. Often unknown to the general public, anatomo-cytopathologists develop and carry out the most innovative personalised medicine examinations every day and evaluate the therapeutic success of treatments recommended for cancer patients.

Cerba Path can count on a network of 40 physicians and 200 collaborators throughout 5 technical platforms (France, Belgium). Our teams work primarily with surgeons, physicians from all disciplines and midwives.

Medical imaging

Medical imaging is increasingly used for the diagnosis of many diseases in addition to clinical examination and other investigations such as biological tests. Continued advances in imaging techniques allow earlier and more accurate detection of diseases, for more targeted, less invasive treatment and close monitoring of the therapeutic response.

At Cerba HealthCare, this activity is currently developed in Italy with 7 radiology centres in Lombardy, Campania and Piedmont.
